

# DHHS Update

---

11/18/2022

Nicole Bissonette, Office of Emerging Infections

# Community Testing

- MOAs with all current and previous testing locations remain in place.
  - Mobile Testing will have 13 sites as of 11/26. Staff can increase throughput by switching to staff-collection rather than self collect model. They can also increase the number of home test kits distributed at sites.
  - Mako Medical maintains 1 team that covers the Brigham City and Logan sites. With a team already in place, they are able to add additional sites with 1-2 weeks' notice.
  - ARUP has assured that there is plenty of supply and staffing capacity to accept MTT samples if UPHL meets their capacity of 750 samples/day.
-

# Test Kit Supply

- No supply constraints exist nationally or with state contracted vendors.
  - DHHS maintains a 6 month supply of PCR test kits, and POC and OTC rapid tests.
  - Ordering process remains the same for all partners.
-

# UPHL

- Panther Platform
  - ~700 samples/day
- Excess would need to go to ARUP

---

# LTCF

- Manage skilled nursing facility (SNF) outbreaks
  - Manage intermediate care facility for individuals with intellectual disabilities (ICF/IID) outbreaks
  - Drop assisted living (AL) facility outbreaks
  - Pull staff from other projects (currently short 2 nurses)
  - The number of facilities with active cases has doubled in the past 30 days
-

# RISE

- Staff will be pulled from special projects to respond to the surge.
  - Increase hours contact tracers can work from 24 to 30.
    - Includes ability to increase current hours of operation
  - Bring on Rapid Trace to assist with workload.
  - Ability to cross train RISE staff in other support efforts as needed
-

# Vaccine

- Have been in a 'surge' since September 1st with over 300k doses administered
  - Current statewide administration capacity is 80k doses per week
  - Have been at ~50-60% capacity for past 4 weeks
-

# Therapeutics

- We expect Bebtelovimab to no longer be authorized for use by early December, we have sufficient antiviral supply to offset this.
  - Approximately 14,000 doses of both Paxlovid and Molnupiravir at partners across the state.
  - Large stockpile of antivirals at the Distribution warehouse.
-

**Thank you**
